Entrance/exit management device for building doors, controls electric lock
when content of group of zones through which person passes, stored in
table, matches with card number read by card reader

MITSUBISHI ELECTRIC CORP 2002.06.06 2002JP-165470

(2004.01.15) G07C 9/00, E05B 49/00, G06F 17/60, G06K 17/00

Novelty: A setting terminal (11) sets up a screen for collecting the log of passing and log of warning with respect to the table storing the group of zones through which the person passes. An electric lock (15) is controlled when the content in the table collates with the card number read by a card reader (14).

Detailed Description: An INDEPENDENT CLAIM is included for entry/exit management method.

Use: For managing entry/exit of person, for building doors.

Advantage: The zone through which each person passes, is cahnged easily and correctly, thus saving labor and improving reliability.

Description of Drawing(s): The figure shows the block diagram of entry/exit management device.(Drawing includes non-English language text).
